INTERNATIONAL
The future. Illuminated.
2018
VISIT US AT
LIGHTFAIR®
May 8-10, 2018

Join us this year at Lightfair: May 8-10

LIGHTFAIR International (LFI), the “annual architectural and commercial lighting trade show and conference,” **May 8 – 10 in Chicago**, sponsored by the Illuminating Engineering Society (IES) and the International Association of Lighting Designers (IALD).

This is the first time since 1995 that Lightfair will be held in the Windy City. The show will convene at McCormick Place, which has 2.6 million square feet of exhibition space, making it the largest convention center in the United States. NSL will be there, along with the world’s leading manufacturers showcasing our latest products, solutions, technologies and innovations.

Come visit us at booth 3753.

Launching at LFI2018, the world’s first DC Smart Modular Lighting Panel

National Specialty Lighting has teamed up with iLLUMA-Drive to present a cutting edge integrated multi-zone DC powered controller for a wide variety of LED fixtures. This new innovative controller operates from a DC input voltage and allows for a multitude of control options including full automation control and dimming.

CENSE; the first of its kind in the world! It is less expensive and easier to install than a traditional AC system and can also be powered from various sources to allow for direct connection to renewable energy sources.

The **CENSE** system is a connected and intelligent system. Inputs can be configured to turn off a single light or an entire

building. Customized scenes can be set and mood lighting can be created. Sensors can also be attached to the system for full control. In addition, the THEA application puts you in control of your energy remotely from your phone or tablet!

POWER IS CHANGING AND SO IS THE WAY WE THINK ABOUT IT
